id="build"

BUILD

Build any bot behaviour you want

File upload
Users can upload documents like a resume when it's useful. We accept png, jpeg, jpg, doc, docx and pdf.

Loops
With loops, your bot can loop on a previous block. You can build menus and FAQ categories with loops.

Advanced logic jump
Go to a specific block based on people's answers or calculation results under your conditions.

Calculation
Set up a variable and/or do calculations

Hidden fields
Use data that you already have, to make your Joonbot more personal or to give you better data.
Learn more →

Recall information
Save data collected into variables that you can use after in the conversation, an email or a Zap.

Stripe payment Coming soon!
Collect payments via Stripe for products, bookings, donations, etc.

Calendly integration
Let your users book meetings with Calendly directly in Joonbot window.

Cards

<section>
id="target"

TARGET Contextualize the appearance of your bot with segmentation features

Traffic source targeting
Display bots based on specific traffic sources and URLs such as Facebook, and Google AdWords.

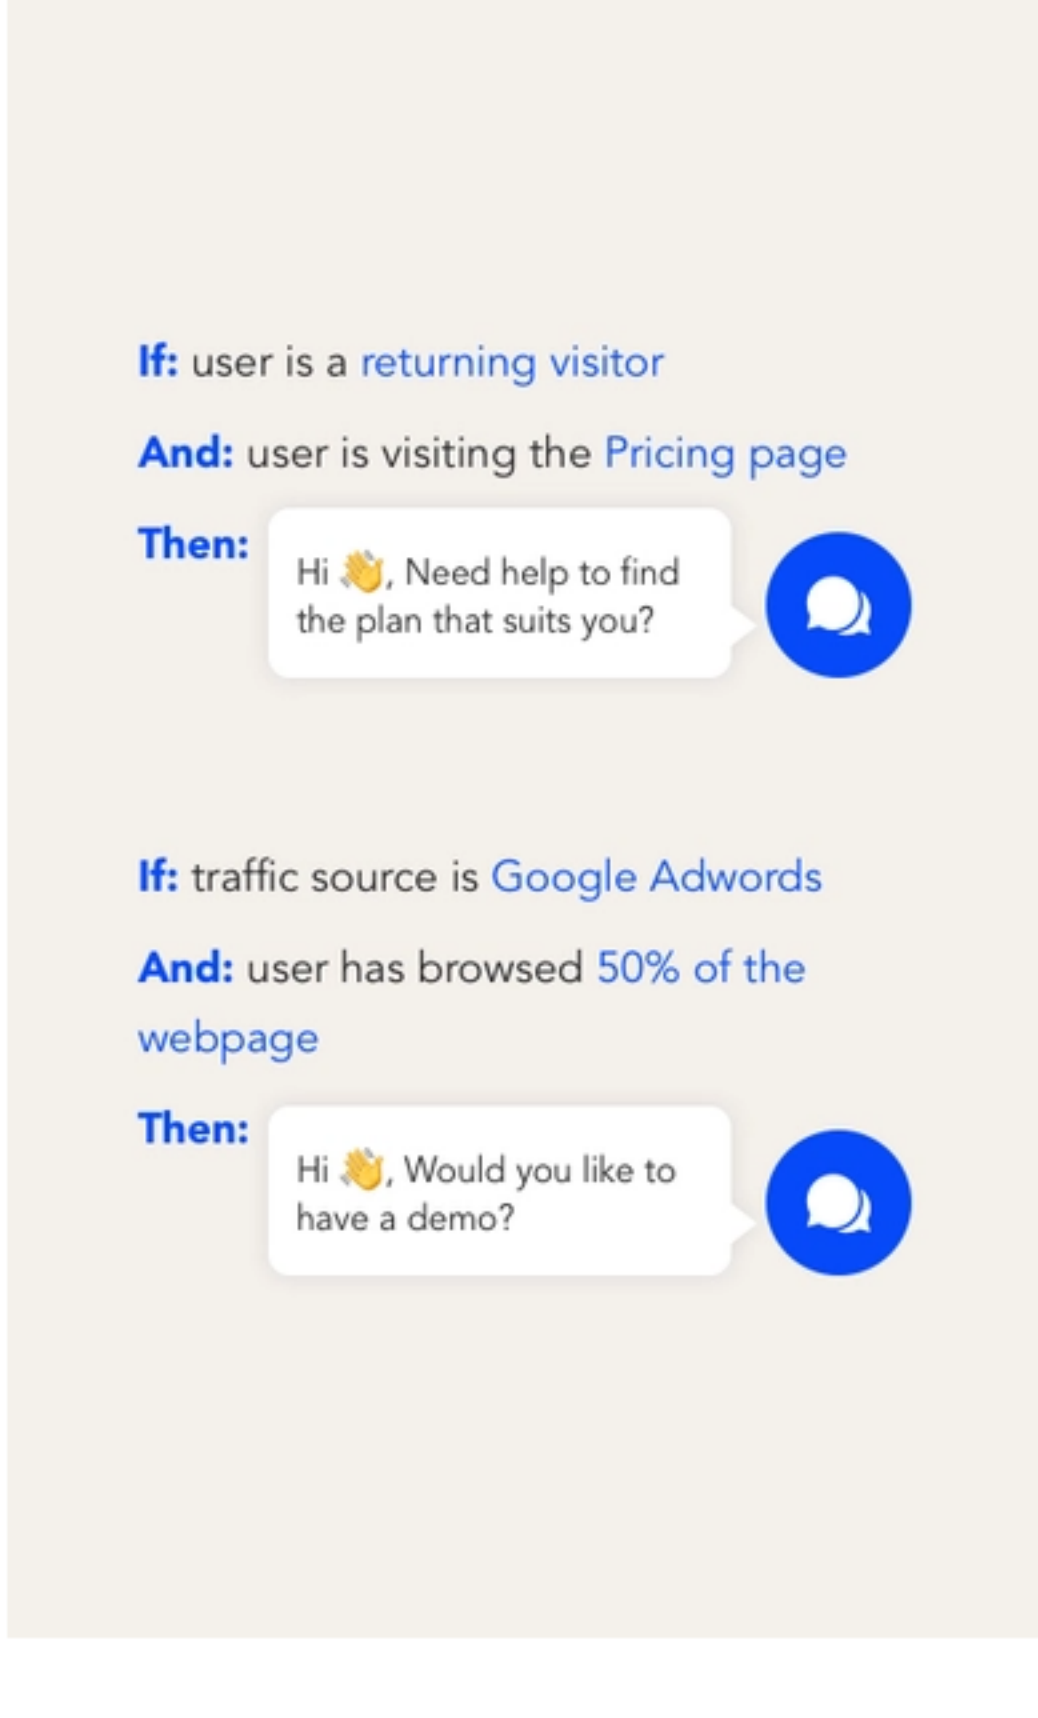

URL browsing triggers
Show your bots depending on the URL the user is browsing

New comers/returning visitors
Coming soon!
Target new comers/returning visitors depending on your goal.

Pages visited
Coming soon!
Trigger your chatbot according to the pages visited by the user on your website.

Scroll triggers
Coming soon!
Only display your bot if a user has scrolled the desirable percentage of a webpage.

Time spent on website
Coming soon!
Trigger your chatbot according to the time spent by the user on your website.

<h3> What's next?

<h5> Here you'll find what we plan to develop in the near future.

<h4> Our next short-term features

Cards

BUILD
Team collaboration/seats
Pay for additional team members or clients so you can work on projects together. It's perfect for digital agencies that create bots for their clients.

ANALYZE
Drop-off rate analysis
See if some of your questions are a huge turn-off for your audience with our top 10 drop-off analysis.

ANALYZE
Results analysis
Analyze how each of your questions were answered by your audience.

TARGET
Click link/button to launch Joonbot
Add buttons or links in your web page that open your Joonbot widget interface.

ANALYZE
AB test analysis
Conduct AB test on everything: images, texts, buttons, etc. Analyze your AB test results and improve your chatbot.

CONNECT
Google Sheets integration - update and get data
Insert and update user's information collected during conversations with your Joonbots to Google Sheets. Also use data from your Google Sheets during a conversation.

<h4> Our next medium-term features

<section>
id="next-medium"

Cards

DESIGN
Font customization
Choose the font you want to have on any of your Joonbot formats.

DESIGN
Crop avatar image
Crop the avatar image of your widget bot the way you want.

DESIGN
Add image to full-page chatbot format
Add an image next to the conversation or as background within the full-page format.

DESIGN
Visual calendar picker for date block
Allow your bot users to pick a date with a visual date picker.

DESIGN
Typing delay
Create a more human user experience by customising the typing delay of your Joonbot's messages.

CONNECT
Stripe payment
Collect payments via Stripe for products, bookings, donations, etc.

CONNECT
Airtable integration
Send data collected during a conversation to Airtable, where you can organize your data and collaborate easily. Also take data from Airtable to use it during your conversation.

CONNECT
Integromat
Create your customized scenarios with Integromat. Automate repetitive tasks involved in using Joonbot and make your work easier.

CONNECT
Google Analytics integration
Track views, clicks and discussions with your Joonbots directly in Google Analytics. Great for helping you better understand your audience and see where there are opportunities for growth or improving user experience.

TARGET
Targeting - New comers/returning visitors
Target new comers/returning visitors depending on your goal.

TARGET
Targeting - time spent on website
Trigger your chatbot according to the time spent by the user on your website.

TARGET
Targeting - pages visited
Trigger your chatbot according to the pages visited by the user on your website.

ANALYZE
